

What could happen to Ireland's Animal industry if I feed food waste to pigs?

The most likely way Food and Mouth disease or Classical Swine Fever could enter Ireland is by feeding food waste to pigs. Infected pigs spread these diseases very quickly. An outbreak of these diseases would shut down Ireland's agriculture business, and cause severe hardship to many people. Affected farms would have to be quarantined and infected animals would have to be destroyed. There would be implications for our tourism business and for our international trade.

We acknowledge that most pig farmers support the prohibition on swill feeding and understand the reasons for it. There is evidence that there is still a small number of non commercial or hobby farmers and potential swill providers operating commercial kitchens, who are not aware of the connection between feeding food waste and a major exotic disease outbreak in Ireland.

You can help to prevent dangerous Animal Diseases.

With your help, we can keep these serious diseases out of Ireland.

What's wrong with feeding food waste to animals?

Food waste can carry diseases such as Foot & Mouth and Classical Swine Fever which can kill farmed or pet pigs and animals of other farmed species.

- Feeding food waste to pigs remains the most likely route by which Foot & Mouth or Classical Swine Fever could enter the island of Ireland.
- Feeding food waste to pigs was the cause of the 2001 Foot & Mouth outbreak in the UK.
- An outbreak of these diseases would shut down Ireland's tourism and agriculture industries, causing economic hardship.

What type of food waste may not be fed to animals?

It is illegal to feed farmed animal species with food waste originating from kitchens or food preparation areas in any premises, including:

Hotels, Restaurants
Guesthouses, Hostels
Hospitals
Schools
Supermarkets
Takeaways
Food manufacturing business
Homes

- ▶ Food waste that can transmit disease includes food of animal origin or food waste which has been in contact with products of animal origin, whether raw or cooked, e.g.
 - products which contain meat such as meat pies, sausage rolls, pizza, meat scraps, bones, etc.
 - products which have been in contact with meat, for example, sandwiches, bread, pizzas, used cooking oil, any kitchen food waste that may have touched meat, etc.

(
The feeding of food waste to animals can cause disease; it is an offence to supply food waste outside of the correct disposal channels.

SI 187 of 2014 provides that A person found guilty of supplying food waste to anyone other than a contractor authorised for disposal of food waste, is guilty of an Offence and is liable to a fine of €250,000 or 12 months in prison or both.
