**ANIMAL HEALTH CERTIFICATE**  
**For the Export of Bovine Semen from the Republic of Ireland to Australia**

**Part 1 To be completed by the Approved Centre Veterinarian**

I, the undersigned Centre Veterinarian, hereby certify that the semen described above and the bull from which it was collected meet the requirements of the Australian Quarantine and Inspection Service condition C8628.

1. Each semen donor has been continually resident and free from any quarantine restriction for the 60 days prior to the commencement of the 30-day pre-collection centre residency period in the Republic of Ireland, which is recognised by the OIE as a foot and mouth disease (FMD) free zone where vaccination is not practised (Article 2.1.1.2.),

The semen was not collected during the FMD exclusion period specified as being between the 1 February 2001 and the 22 June 2001.

2. The semen in this consignment was collected, processed and stored under conditions which comply with the standards laid down in Council Directive 88/407/EEC.

3. For sex sorted semen, if included in this shipment,

- equipment used for sex-sorting sperm was cleaned and disinfected between animals according to the sex semen licensor's recommendations.

where seminal plasma, or components thereof, was added to sorted semen prior to cryopreservation and storage, it was derived from animals of same or better health status.

4. Each semen donor showed no signs of Johne's disease during the collection period.

5. I the approved centre veterinarian

- a) Ensured the isolation of the donors from all other ruminants not of equivalent health status prior to semen collection
- b) Supervised the isolation period supervised the collection of specimens for testing
- c) Supervised the collection and processing of the semen in accordance with the standards laid down in Council Directive 88/407 EEC and updating legislation;
- d) Ensured that suitable antibiotics were added to the diluent and that diluents were prepared in accordance with the standards laid down in Council Directive 88/407 and updating legislation
- e) Verified the permanent identification of the semen straws with the identification details of the donor and date of collection or a code from which this information could be determined.

6. The semen in this consignment has been stored:

- Only with other semen or embryos collected for export to Australia
- In sealed containers, and
- Since the end of the collection period until export in an approved secure place.

7. All reproductive material for export to Australia was identified in a legible and non-erasable manner, and was stored since the end of the collection period until export under the supervision of the Approved Veterinarian(s) in containers in which no biological material other than semen, embryos or ova of equivalent health status as specified in this Veterinary Certificate was held. Reproductive material was not removed from containers for further processing, or aggregation with other reproductive material unless under the supervision of the Approved Veterinarian at an approved centre or laboratory.

8. The shipping containers used for this consignment are either

\* (i) A new shipper

OR

\* (ii) Prior to loading, the shipper was emptied and inspected and any loose straws removed. The shipper, including all surfaces contacting the straws, was disinfected with: \_\_\_\_\_ (active ingredient), on \_\_\_\_\_ (date)

The following disinfectants will be accepted by AQIS:

2% Available Chlorine, 2% Virkon, or Irradiated at 50kGy.

*\*One of the options above must be deleted*

Only new liquid nitrogen was added to the tank. The container was sealed prior to export and the seal recorded on the health certificate.
