Irish National Forest Standard
ACKNOWLEDGEMENTS

The Forest Service would like to express its appreciation to the Plenary and Working Groups who played a crucial role in producing the Irish National Forest Standard. The Forest Service also acknowledges contributions from all those stakeholders who responded to the consultation process.
CONTENTS

Foreword 1
Introduction 3
Background 4
The regulatory framework 6
Sustainable forest management 8

Criterion 1: Maintenance and appropriate enhancement of forest resources and their contribution to global carbon cycles 11
   Indicator 1.1: Policy, legislation and support measures 12
   Indicator 1.2: The forest resource and land conversion 12
   Indicator 1.3: Forest ecosystem carbon budgets 12
   Indicator 1.4: Forest industry carbon budgets 13

Criterion 2: Maintenance of forest ecosystem health and vitality 15
   Indicator 2.1: Policy, legislation and support measures 16
   Indicator 2.2: Defoliation of forests 16
   Indicator 2.3: Damage caused by biotic and abiotic agents 16
   Indicator 2.4: Beneficial influence of biotic agents and ecosystem processes 17
   Indicator 2.5: Changes in physical and chemical properties of soils 17

Criterion 3: Maintenance and encouragement of productive functions of forests (wood and non-wood) 19
   Indicator 3.1: Policy, legislation and support measures 20
   Indicator 3.2: Productive capacity 20
   Indicator 3.3: Competitiveness of forest industries 21
   Indicator 3.4: Contribution to the national and local economy 23
   Indicator 3.5: Non-wood values 23

Criterion 4: Maintenance, conservation and appropriate enhancement of biological diversity in forest ecosystems 25
   Indicator 4.1: Policy, legislation and support measures 26
   Indicator 4.2: Area and type of forest 27
   Indicator 4.3: Habitat and species diversity 28
   Indicator 4.4: Forest management 29
   Indicator 4.5: Conservation of species and utilisation of native genetic resources 31
   Indicator 4.6: Diversity and landscape 32

Criterion 5: Maintenance and appropriate enhancement of protective functions in forest management (notably soil and water) 34
   Indicator 5.1: Policy, legislation and support measures 35
   Indicator 5.2: Protection of waters 35
   Indicator 5.3: Protection of soils 35

Criterion 6: Maintenance of other socio-economic and cultural functions and conditions 37
   Indicator 6.1: Policy, legislation and support measures 38
   Indicator 6.2: The socio-economic and employment contribution of the forestry sector 38
   Indicator 6.3: Public awareness and participation 39
   Indicator 6.4: Forestry education, research and training 41
   Indicator 6.5: Recreation and amenity values 41
   Indicator 6.6: Cultural merit Indicator 6.7: Safety in the forest 42

Glossary 49
FOREWORD

These are exciting and challenging times in Irish forestry, where the objective over the next 30 years is to expand the national forest estate from 9% to 17% of the land cover. This will undoubtedly have major economic, social and environmental implications for the country. As Minister of State with responsibility for forestry, I will be insisting that this development will be carried out within the principles of sustainable forest management (SFM). Following from the Third Ministerial Conference on the Protection of Forests in Europe, held in Lisbon in 1998, Ireland is committed, in perpetuity, to the sustainable management of all our forests. We are custodians of these forests and have a moral responsibility to pass them on to future generations in a much improved and environmentally enhanced form. With this in mind, it is an opportune time to launch my Department’s IRISH NATIONAL FOREST STANDARD, CODE OF BEST FOREST PRACTICE and suite of five Environmental Guidelines.

The IRISH NATIONAL FOREST STANDARD outlines the criteria and indicators relating to the national implementation of SFM. Qualitative and quantitative measures are described by which progress towards the practice of SFM will be monitored under Irish forest conditions.

I am particularly pleased that Ireland’s CODE OF BEST FOREST PRACTICE is the first to be produced in Europe. This describes all forest operations and the appropriate manner in which they should be carried out to ensure the implementation of SFM.

The suite of five Environmental Guidelines relating to water quality, archaeology, landscape, biodiversity and harvesting, are the mechanisms by which the Forest Service will ensure that the environmental aspects of SFM are implemented. Adherence to the Guidelines is a condition of grant aid and felling licence approval.

The wide-ranging consultation process which took place involved public discussion, expert opinion and the input of sectoral interests including non-government organisations, and is strongly reflected in all of the documents.

These important publications are the result of many long hours of work by the contributors, Forest Service staff and all those who engaged in the consultation process. The implementation in the forest and at national level of the Standard, the Code and the Environmental Guidelines, together with effective monitoring and enforcement by the Forest Service, will ensure that all timber produced in Ireland is derived from sustainably managed forests.

Hugh Byrne TD
Minister of State at the Department of the Marine and Natural Resources
