

Murray Timber Group

To whom it may concern,

I am the forestry manager for murray timber group. The current situation is crazy. We use approximately 550,000m3 of logs yearly and currently we have five weeks supply ahead of our plants with no outlook for 2021. Our company has invested millions to cut this crop but now it looks like we may have to close our two plants very shortly. This is a very worrying situation. Please resolve the full backlog and deal with this serious issue asap or watch this industry fall apart.

Regards,
