Let Irish & European farmers use genetically modified grain so less sprays used, better for safety of farmers and environment or allow use of gene-edited grain.

Set up a burning station to generate electricity from straw and waste in the former peat burning stations.

On the beef side, if a quota was given to each beef farmer in Ireland and Europe and they were paid a profitable price on 95% of their herd averaged over the last 5 years and any animals extra would be sold at market price. This should stop overproduction. Extra price could be funded by the consumer collected by the retailer and fair price could be regulated by the department and IFA.
